Adrien Gibert

Full Stack Developer - 6+ years of experience

8048075861

adriengibert13@gmail.com

United States of America

Within my 7 years of professional experience, I have gained knowledge in 3 different aspects of IT: Front-End Development, Back-End Development, and Automated Quality Assurance Testing. I am primarily a JavaScript programmer; I have had to write Java and Python functionality but I am not proficient.

Experience

Software Engineer (Contract)
Feb 2019 - Present

I was hired as a contractor to help the developed of the new UI and API for the disclosures, articles, task guides, etc. used by call center agents and other associates in Capital One.

· Involved in developing components of single page applications Vue.js
· Implemented emergency caching strategy for REST-API using Elastcache Redis to store multiple data calls using a combination "key", "field", and "value" pairs
· Responsible for developing automated unit, integration, and performance test suites
· Created an API layer on a legacy application by modifying Apache Solr configuration and creating Python 3 scripts
· Create and maintain AWS infrastructure such as EC2 servers, Security Groups, Lambda functions, and S3 buckets
· Regularly update application dependencies, such as application packages and AWS machine images, and modify code based on cyber recommendations
· Rebuild API application to remove an external dependency of a deprecated internal module
· Create PagerDuty alerts from Splunk and DataDog application data to identify incidents quickly and mitigate consumer impact
· Perform quarterly AWS regional failover exercises for 3 applications

IT Consultant
Sep 2018 - Present

I am managed by this company for my contract with Capital One. They provide developers with training before being sent to work on projects.

· Trained in the basics of the MongoDB, Express, React, AngularJS & Angular 2+, and Node.js
· Used Firebase Real Time database to receive data from POST, PUT, DELETE, and GET API calls
· Mock interviews given every week to ensure knowledge of basic Front–End vernacular
· Created a "Social media" SPA as the final project to represent an overall understanding of the programming principles taught

Associate Automation Engineer
Mar 2017 - Sep 2018

I was hired to develop an automated test script and perform manual testing to remove an outsourced contract on regression testing.

· Helped develop UI automation test suite for multiple platforms using Jasmine and WebDriverIO
· Performed manual testing for tickets (development, defects, etc) in their respective sprint
· Regularly run automation suite to check stability of the platform
· Perform regression testing for monthly releases to ensure application stability after deployment

Software Development Intern
Aug 2016 - Jan 2017

I experinecd both Level 3 Support for store associates and was tasked to develop an application in Excel to generate styles.

· Create documentation of Carter's applications for store iPod devices to enhance customer experience
· Push applications to over 600 stores using the AirWatch Console
· Troubleshoot store iPod device tickets dealing with the applications and connectivity issues
· Actively developed VBA program in Excel resulting in improved daily operation
· Created a VBA function to control user pasting that was implemented in tools currently used

Volunteer

IT Volunteer   Sep 2016 - May 2017
Digital Youth Founders

Through the YearUp program, I volunteered to be a mentor to students working on business applications. Afterwards, I was offered the opportunity to teach an after-school IT class.

· Mentored the DYF students phases of the SDLC towards a project they were trying to create and developing their presentation skills of a business concept
· Taught an after-school class on Scratch and Code.org to 3rd-5th grade students

Microsoft Visual Studio Code

Cypress.io
